

Summary

Software developer with hands-on experience building full-stack web applications and AI-powered tools. Strong foundation in JavaScript, React, Python, Flask, Node.js, databases, REST APIs, Git, and UI/UX. Experienced in developing, integrating, and deploying application features, with a focus on problem solving, clean implementation, and practical software development.

Projects

Custodia.ai — AI-Powered Security & Assistance Platform

Python, AI/ML, APIs, Web Technologies | [GitHub](#)

Developed an AI-powered application focused on intelligent assistance and security-oriented functionality through a modern web interface. Integrated AI capabilities and external APIs to process user input and generate context-aware responses. Designed interactive frontend components with emphasis on usability, responsiveness, and real-time interaction. Co-authored and published a research paper documenting the system's technical approach, implementation, and findings.

RoomSync — Interactive Room Booking System

React, Tailwind CSS, Node.js, Express, MongoDB | [GitHub](#)

Developed a full-stack room booking platform with React, Node.js, Express, and MongoDB. Implemented booking validation and conflict-prevention logic to prevent overlapping room reservations. Built calendar-based scheduling workflows and connected frontend components with backend APIs. Co-authored and published a research paper covering the system architecture, implementation, and proposed solution.

AgriLocal — Smart Farming Marketplace

HTML, CSS, JavaScript, Flask, SQLite | [GitHub](#)

Developed a multilingual web platform connecting farmers with consumers through product discovery and marketplace functionality. Implemented crop recommendations, product search, and localized farming guidance. Built backend functionality using Flask and SQLite for application data management. Runner-Up at the Smart India Hackathon (SIH) college-level campus round for the AgriLocal solution.

Work Experience

Web Development & Designing Intern — The Sparks Foundation (GRIP)

May 2024 – June 2024

- Developed responsive web interfaces using HTML, CSS, and JavaScript for task-based projects.
- Implemented reusable UI components and improved usability while maintaining code quality.
- Used Git/GitHub for version control, project submissions, and development workflow.

Freelance Web Developer

2023 – Present

- Developed interactive web applications and landing pages using JavaScript, Tailwind CSS, Python, and Flask.
- Integrated REST APIs and backend logic and deployed projects using GitHub Pages and cloud platforms.

Skills

Languages: JavaScript, Python, HTML5, CSS3

Frontend: React, Tailwind CSS

Backend: Node.js, Express, Flask, REST APIs

Databases: MongoDB, SQLite

Tools: Git, GitHub

AI / APIs: OpenAI API, Web Speech API

Education

B.Sc. Information Technology — Vidyalankar School of Information Technology, Mumbai 2023 – 2026

HSC (Commerce) — Anjuman Islam College of Commerce and Arts

SSC — Daffodil English High School

Achievements

- Winner of Code Canvas — Campus Coding Competition
- Multiple intercollegiate certificates for front-end development projects
- Recognized for UI/UX creativity and AI integration in college tech events
